

Twin Pump Controller

The Twin Pump Controller system controls the application rates of liquid chemicals or fertilizer by varying the RPM of 12 VDC pump(s). No servo valve is required with this system. Designed for easy installation and operation.

Features:

- Single or dual pump control system.
- Programmed to turn on secondary pump ONLY when needed.
- On-the-go rate adjustment in Auto control mode.
- Built-in capacity for VRA.
- Low Tank Alarm: Notifies when tank level is low (settable).
- Troubleshooting enhancements including "No Speed" and "No Flow" messages.

IMPORTANT NOTE: When using two pumps the TOTAL load must not exceed 30 amps.
